Use these libraries and the storms data set, as modified below, as a starting point for the following question:

```
## -- Attaching core tidyverse packages ------------------------ tidyverse 2.0.0 --
## v dplyr     1.1.4     v readr     2.1.5
## v forcats   1.0.0     v stringr   1.5.1
## v ggplot2   3.5.1     v tibble    3.2.1
## v lubridate 1.9.3     v tidyr     1.3.1
## v purrr     1.0.2
## -- Conflicts ------------------------------------------ tidyverse_conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
```

CQ1: The following code creates a scatterplot that displays the relationship between wind speed and air pressure for the three storms Sandy, Joaquin, and Humberto. Add to the code below to create a line overlay for each of these storms. Do not adjust the size of the points. Your final plot should have three lines, each a different color. Your plot will be saved as CQ1.

```
## `geom_smooth()` using method = 'loess' and formula = 'y ~ x'
```
