Use these libraries and this data set as the starting point to answer all of the questions below.

CQ1: Use the code in the code chunk below as a starting point, then write code so that intersections in the Address variable, currently denoted with a `&`, are expressed with the `@` symbol instead; e.g., MAIN ST @ BUTTONWOOD ST. Be sure to keep track of any white space that is needed.

CQ2: Use the code in the code chunk below as a starting point, then write code to remove excess white space around the values of the reason, towns, time, and date variables.

CQ3: Use the code in the code chunk below as a starting point, then write code to convert all of the values of reason to lowercase.
